

## // ORBITAL ACCESS LIMITED

GLOBAL LAUNCH SERVICES FOR SMALL PAYLOADS FROM HORIZONTAL TAKE-OFF SPACEPORTS

### // THE ORBITAL 500

Orbital Access Limited simple mantra is that small payload launch must continuously incorporate latest technological advancements to drive continuing lower cost access to space. By doing so we enable continuing growth in space based applications and infrastructure to meet the ever increasing demands of humanity. Therefore we are engaged both in the development of the most efficient horizontal payload delivery systems today's technology allows, but also in the development of a roadmap for future launchers based on the technology already coming down the pipeline.

The Orbital 500 is our initial launch system for payloads up to 500kgs. Our future development pipeline is being developed through UK Space Agency funding and our Future UK Small Payload Launcher programme, the FSPL<sup>UK</sup> project.
